Alberta Weekly News Bulletin

Issued by the Publicity Com-
missioner, Government of Alb-
erta, Edmonton, July 21, 1934

Important Seed Grain Field Days

Three important seed grain field days will be held in the province during August, one at Vermilion, August 2; at Claresholm, August 3, and at Oids on August 10. These are held under the auspices of the provincial department of agriculture and dominion seed branch, co-operating with the Alberta Wheat Pool, the Canada Malting Co., the U. G. G. and the Western Canada Flour Mills. Samples of grain from seed drills of farmers in various districts were collected this spring, and these samples have been grown in plots at the schools of agriculture and will be expected on the field days, thus giving an opportunity to be concerned to note the kind and quality of seed.

Unemployment Conference
Alberta government will be represented by Hon. Geo. Hoadley, minister of health and telephones, at the unemployment conference at Ottawa at the end of July. Accompanying him will be J. C. Thompson provincial auditor.

Number of Unemployed
There were 1108 fewer registered unemployed persons in Alberta on July 14 than one week previous according to figures released by the provincial employment service.

Unique Telephone Call
Making another striking innovation in telephonic communication the Alberta Government Telephones put through a telephone call this week from Jasper to the Canadian Pacific liner Empress of Britain, crossing the Atlantic from Quebec to Liverpool.

This was the first time such a call has been put in.

Take over New Duties
After 50 years in dairying, 32 of which were spent in this province, Dr. C. P. Marker, dairy commissioner, retired this week, to be succeeded by Roy Sweeney, native of New Brunswick, and for some years chief federal grader at Winnipeg.

Make Homesteaders Preserve Trees

Consideration is being given by the provincial government to enactment of regulations compelling homesteaders to retain on their land a portion of the natural timber, according to Premier R. C. Reid. This will be in line with the general reforestation policies adopted by the premier when he took over the then newly-formed lands and mines department in 1931.

THORA SMITH PASSES AWAY

Miss Thora Smith, aged 19 years, daughter of Mrs. Phoebe Smith of Cardston, and formerly of Raymond, passed away at the family home in Cardston Monday July 23rd, and funeral services were held Tuesday, July 24th, in the Second Ward Chapel in Cardston, with Bishop J. Y. Card in charge. Interment was in the Cardston cemetery.

The speakers all referred to the patience and fortitude of deceased in her long period of suffering and pain which preceded death, and felt that it was a pleasant relief for her, though painful to those left to mourn her loss.

She was known to many Raymond people, and her parents, Tom Smith, who predeceased her a number of years, and Phoebe, were raised in Raymond and were married here.

Quite a number of Raymond people were present at the funeral in Cardston, including practically all of the family relatives.

News Notes

Paul Schneider had a carload of Raymond people to the Temple Wednesday last.

Mr. and Mrs. I. H. Burgess of Central Utah, are here visiting with relatives. Mrs. Burgess is a sister of Mrs. C. E. Hancock.

The wheat market has been somewhat erratic the past week and those with grain to sell have been watching quotations pretty closely.

A set of community plate silver will be given to the holder of the lucky ticket at the Capitol Saturday 4th. Be there with your tickets.

Mr. and Mrs. O. H. Snow were in Lethbridge on Wednesday to the wedding of Miss Mary Lovering, daughter of Dr. and Mrs. J. E. Lovering. Miss Lovering is known to many Raymond people through her piano teaching here for nearly two years, and her many friends wish her much joy and happiness in her married life.

LOU'S CORNER

Car owners often wonder why their tires have not given longer service, and so today we are offering some of the factors contributing to rapid tire wear. At 100 degrees temperature the rate of wear is times faster than at 40 degrees. Road surfaces get from 20 to 30 degrees hotter than atmospheric temperatures, and as a result, only about 50 per cent as much mileage can be expected in all summer driving as in all winter driving.

And then, speed has a great deal to do with the wear of tires. At 50 miles per hour the tread wear is twice as fast as at 25 miles an hour. Inflation is an important factor to consider, very few people realize that an average balloon tire run on 6 pounds underinflated will lose about 30 per cent of the total mileage built into the tire.

Next week we will give you more reasons why your tires do not seem to give their full mileage.

Local Crop Conditions

Crops locally are looking good to date, but rain is needed by the later grain to keep it growing rapidly, and spring wheat would make a much more uniform crop with moisture to help it fill. Pastures are good, but are turning brown, partly because of curing, and partly due to lack of rain.

Some winter wheat and a field of two of rye have been cut and stooks are quite nice and thick in the fields. Spring grain is beginning to turn now. Oats give stacks are dotting the countryside.

Sugar beets give promise of a better than average crop, and the tonnage of 1932, or higher is expected this year. Growers are busy now with the water, and Company officials recommend eight inches of water for the beets during July. This is a great deal of water but experiments have proven that it does make good beets. Beet harvest will likely start two to three weeks earlier than usual.

SOCIAL CREDIT CLASSES WELL ATTENDED

Another very successful Social Credit class was held in the High School last Friday evening, when Solon E. Low treated the subject of Social Credit and Exchange, and showed very clearly how, if adopted on a national basis all questions of international settlements could be handled by Social Credit, and that in a Provincial way it would work just as well.

This was one objection that many had raised regarding Social Credit, but at the conclusion of the lecture, questions were asked and answered, and every conceivable objection was answered to the satisfaction of all who were in attendance at the meeting.

Another session will be held tonight (Friday) in the High School and the public is invited to attend and hear further discussion on this timely topic.

HAEMORRHOIDS
The change which has taken place in medicine, thanks to increasing knowledge, is well illustrated by recalling that not so long ago, haemorrhage from the lung was considered to be a cause of tuberculosis and not, as we now know it to be, a result of the disease.

The old belief was based upon observation that a progressive tuberculosis followed, in many cases, upon haemorrhage. Reference is made to this belief because it is the purpose of this article to point out to our readers that as haemorrhage from the lung is so commonly a symptom of tuberculosis, all such bleeding should be considered as being due to tuberculosis until proved otherwise.

The appearance of blood in the mouth is the first evidence of tuberculosis in many cases. Looking back, other symptoms may have preceded it, but it was the haemorrhage which first made the patient realize that there was something amiss, and so sent him to his doctor. It is likely unfortunate that all cases of tuberculosis do not experience a haemorrhage very early in the disease. Those who ignore such symptoms as loss of weight, or persistent coughs, are sufficiently frightened by finding blood in their mouths, or observing it in their sputum to seek medical help. Itself is rarely dangerous. Nearly all haemorrhages subside without, in themselves, doing the patient any serious harm. Haemorrhages which occur early in the disease may do a great deal of good, indirectly, because they bring the patient under treatment in that early stage of the disease when there is a much better chance for recovery, thus lessening the required time for treatment, and decreasing the danger of spreading the disease to others.

Haemorrhage from the lungs may be caused by diseases other than tuberculosis. A thorough medical examination and a study of the patient's condition are required to determine the cause in each particular case. Practically, it means that the appearance of blood should always be regarded seriously, and that the cause should be immediately ascertained. This is the only means whereby proper, early treatment may be secured.

We are meeting with considerable success in our war on tuberculosis, but there is still much to be done before this foe is vanquished. Individually and collectively, we can help by knowing more about the beginnings of the disease, in order that those who show or who experience the signs or symptoms associated with the onset of tuberculosis may not delay in finding out the true cause of these symptoms in their particular case, and when necessary, secure the early treatment which is most effective.

Mr. & Mrs. Geo. Court, Mr. & Mrs. Vern Henry are spending the week in Waterton park, getting a little vacation before harvest starts.

A heat wave across the United States last week took the lives of 150 people according to reports, and when this report was made, there was no indication of any let up in the scorching heat.

Threshermen! If you want something reliable to feed your tractor, try Red Distillate. Those who have used it keep coming back for more. D. A. Watson will be pleased to serve you in this respect.

Unabated heat across the central States has taken a death toll now up to 800 and no sign of relief in sight. According to those who have been in these territories one cannot imagine the bareness and desolation that greets the eye from horizon to horizon with not a green thing in sight.

Mr. and Mrs. A. W. Kirkham returned over the week-end from a weeks trip to Utah, going through Glacier Park on the way down, and Yellowstone Park on the way home. They report a very pleasant trip, but "A. W." says Utah and parts of Idaho have never been so dry in years as at present time. Wells that have never failed before, are absolutely dry now, and crops a complete failure over a very large percentage of the acreage.

A Nazi coup to gain control of Austria, cost the life of Chancellor Engelbert Dollfuss, brought strain and worry to the nations of the world for a couple of days before the Fascist element of Austria got control of the situation and named a new Chancellor who stated that his government would carry out the plans of the deceased Chancellor. One of the first moves of the new Government was to pass legislation providing for the future of the wife and children of the beloved Chancellor.

(Winnipeg, July 23rd, 1934)

GENERAL

Crops over most of Alberta and the northern areas of Saskatchewan and Manitoba continue to make favorable progress but the dry hot weather of the past week and grasshoppers have caused further deterioration of the southern areas of Saskatchewan and Manitoba. Hail damage has been serious in limited areas of Saskatchewan and Alberta. In the Province of Quebec crops as a whole present a good appearance and have responded well to satisfactory weather conditions. In Ontario general rains during the past week have benefitted all grain and root crops although more moisture is needed in the southern section of the province where precipitation to date has been inadequate. In the Maritime Provinces grain and root crops have withstood a hot dry spell and are still in good condition but rain is needed. In British Columbia crops continue to mature several weeks earlier than usual.

ALBERTA

Northeastern Area: Wheat is mostly headed out and condition of all grains is generally satisfactory, but rain is required in the east and west central districts. Southern Area: Continued drought and depredations of grasshoppers are causing a retrogression of crops generally. Crops are being cut for feed in some districts. Pastures are drying up.

SASKATCHEWAN

Northern Area: Wheat is largely headed out and condition of all grains is generally satisfactory, but rain is required in the east and west central districts. Southern Area: Continued drought and depredations of grasshoppers are causing a retrogression of crops generally. Crops are being cut for feed in some districts. Pastures are drying up.

MANITOBA

Wheat is practically all headed. Crop prospects continue favorable in the north and reasonably good over the Portage plains and Red River valley areas. Elsewhere crops are uneven and patchy and conditions are quite poor in the southwest where drought, heat and grasshoppers have taken severe toll. The feed situation is serious in parts of this area.

BRITISH COLUMBIA

The yield of hay is above average. Harvesting of fall wheat has commenced and average grain crops are indicated. Early onions and semi-ripe tomatoes are now being shipped. Apricots are being picked, and although small, an above average yield is expected. Other tree fruits are making satisfactory progress. The yield of hops will be slightly below average. Pasture generally is good and there has been no shortage of water for irrigation purposes.

SUBSCRIBE to the RECORDER.

A hail storm last Friday night in the vicinity of north and central Saskatchewan cut a swath ten miles long and four miles wide, smashing windows and destroying crops and gardens.

Flying from Calgary to Denver, Colo., seems to be practically doing away with distance. When it can be done in 10 hrs. A few years ago these reports would be startling, today they are read over and dismissed with a casual comment that it was good time.

Editorial Column

LET'S GET THAT ROAD

As mentioned in these columns some time ago, we believe there is a splendid opportunity right now to get a connecting link of gravel from Raymond thru to the Sunshine Trail on the east, either at Craddock or at Stirling. And we also believe that NOW, immediately, is the time to act.

The Wrentham district is anxious to have a hook-up with the Cardston-Lethbridge Water-ton Park road, as is also the New Dayton and Warner district. It is not likely that Milk River would be with us, because there are after a secondary road through from Bow Island, Foremost, Milk River, and across the old McIntyre lease country into Cardston. This would be good, but it would be a very expensive undertaking across a long stretch of sparsely settled country.

We are of the opinion that a concerted action on the parts of the Raymond district and the other three mentioned, would have a very favorable effect on the Provincial government. This piece of road needs graveling. It is used extensively in the traffic to and from the oil fields on the border line, and would be a shorter route for tourists between the Canadian National Parks, as they could start at Waterton and work north.

There has always been contention regarding the route this link should take. The Government argue that a straight line is the shortest distance between two points, and their engineers have the gravel surveyed to go straight east from Raymond to Craddock, and connect with the Sunshine trail. There are many who favor the route jogging at the Perrett corner south of Stirling, and hooking up with the gravel on the east side of the village of Stirling. The Government said they couldn't move and some of the ratepayers said they wouldn't move. This was several years ago, and the matter has been dropped.

The Sugar City Municipality expressed a willingness to connect Stirling with the gravel, just as soon as the stretch from Welling to Craddock was made part of the secondary highway and connected and cared for by the Government. As far as we can learn this offer still stands. The Government has not committed itself for several years on the proposition, but under present conditions,

with a considerable amount of money to be expended on public works in the Province, it seems only fair that we should get this much needed piece of work done. The U.F.A., Board of Trade, and every other organization should go after it through their locals and stay with it until it is put over.

Remember one thing, don't tell the government what you will have and what you won't have. We tried this once and it didn't work. Tell them what you prefer, but leave the choice to them. If we don't we may kill the project again.

WEEKLY LETTER

Requeening by the "Hole in Wall Method"

Requeening is drawing the attention of beesmen at this time and a simple method for rearing a few queens that has been used quite successfully at this Station should be of timely interest. It is called the "hole in the wall" method and its main advantage is that it requires very little time other than that needed for regular handling of the colony.

The need of requeening most colonies every year is emphasized by H. T. Luther, head beekeeper at this station, who points out that only a few queens are able to satisfactorily carry on the heavy burden of egg laying for a second year and much of the difficulties encountered in controlling swarming and wintering bees can be attributed to the use of old worn out queens.

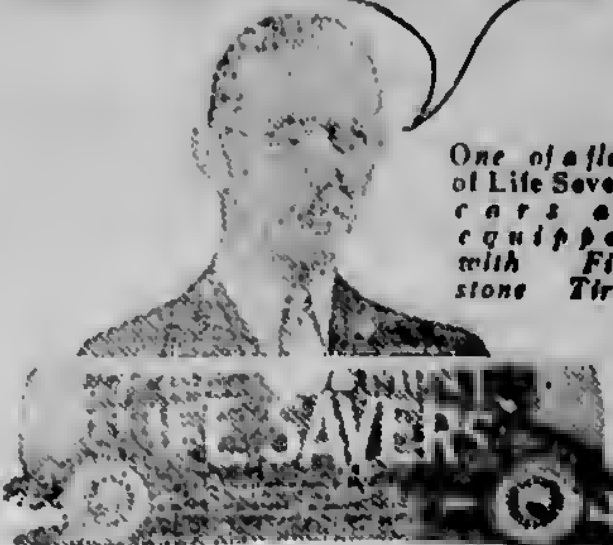

The best time for general requeening, Mr. Luther says, is between July 15th and very early August. This gives the requeen time enough to produce the young bees needed for successful wintering.

Some beekeepers prefer to buy rather than raise their own queens and this is often necessary when queens are needed in a hurry. However quite as good or better queens may be reared in the apiary and the hole in the wall method is quite satisfactory where a limited number is needed.

The procedure is to first place a queen excluder immediately above the brooder chamber of the colony and a second queen excluder is usually placed above the extracting supers. Next, a deep super containing no more than eight frames, but well stocked with honey and pollen is placed above the second queen excluder. Then a frame of unsealed brood, containing eggs and larvae from a selected queen, is placed in the space in the upper super made available by the removal of the two frames of honey from the centre. Finally an entrance is made at the back of the upper super by boring a half inch hole near one of the lower corners. This is where the method gets its name.

In one week the top super is examined for queen cells and all but two in different stages of development, are removed. These two queen cells are left to be drawn out and capped by

2 EXTRA CORD PLIES UNDER THE TREAD

Firestone High Speed TIRES

the bees, and the more advanced virgin queen to emerge, become mated, return to the colony and start laying. The second queen cell is left to develop in case the first queen gets lost in her mating flight. Usually the first queen to emerge returns safely and she destroys her younger sister. In case of wet weather prevailing at the time for the virgin queen to emerge, the hole in the wall is plugged up until more favorable weather prevails.

When the new queen is laying satisfactorily and producing desirable brood in the upper super the old queen in the lower brood chamber is removed and the queen excluders are taken off to allow the new queen to descend at will to the low chamber and to carry on as the queen of the whole colony.

Mr. and Mrs. Reg Cooper were in Stirling Monday to the Stampede, where Reg. was judging in the Bucking Contest.

The Shady Nook Stampede is on today, and many Raymond people are attending it, as on-lookers and participants.

Mrs. Geo. Fromm, Jr., daughters Daphne, Barbara and son Ronald, of Salt Lake City, Utah are here for a three weeks visit with her relatives, the Fromms and Schneiders.

WITH CANOE AND PADDLE ON CANADA'S WATERWAYS

CHANGE is the prime essence of a vacation and a canoe trip in Canada is one method by which the stress of daily life can be exchanged for a tranquil, carefree existence. It may be for a limited time only but its effects are felt all the year round. Jostling crowds, rumble of traffic, hot pavements and vitiated air have no place in the life of the canoeist.

A large number of interesting routes are outlined in "Canoe Trips in Canada," a booklet recently issued by the National Parks of Canada, Department of the Interior, Ottawa. Following the routes described there in one can drift lazily along or relive the strenuous days of the voyageur. There are cruises which lead for a hundred miles through canal, stream and lake with alternating civilization and lightly wooded country. There are long, smooth flowing rivers and placid lakes on

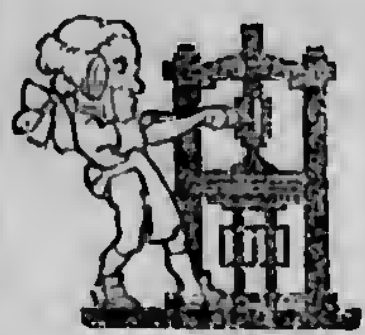

which one can travel for days, and by contrast rushing streams which ever and again break into foaming rapids and thundering falls. There are adventurous trips through wilderness country along routes once followed by Indian and fur-trader, now almost forgotten so seldom are they travelled. Strange geological formations, wild life, good fishing, the charming and the picturesque await the advent of one's canoe on the numerous and varied water trails of Canada.

THE RAYMOND RECORDER

New Canning Industry for Southern Alberta

REPRINT FROM "FARM AND
RANCH REVIEW," CAL-
GARY, ALTA.

A Company has recently been formed, "National Food Products, Ltd., with the object of promoting the canning of vegetables and fruit produced in Alberta, and also to establish a cheese, and, eventually condensed milk, factory. The industry will be located at Brooks, Alberta, in the heart of the Eastern Section of the C. P. R. irrigation bloc.

One of the greatest needs of Western Canada today is a home market for agricultural products, such as vegetables and small fruits which, owing to their perishability and bulk, cannot readily be exported. A plant of this nature will give new impetus to the production of peas, beans, tomatoes and other vegetables, and provide a cash market in the midst of our farming communities, and will also afford employment for members of farm families, male and female, who can be spared from home for short periods.

It is also the intention, that the new industry shall manufacture soups of various kinds, from the raw material produced

on our farms. This new industry will obviously fill a long felt want inasmuch as the volume of canned food consumed in Canada, is increasing by leaps and bounds. During the past year the production of canned vegetables in Canada reached over four million cases, and that of soups over one million cases. It is evident, therefore, that an almost unlimited market now exists for such products.

The Demand for Canned Goods

The industry is now largely confined to Eastern Canada, and to some extent, British Columbia, which means that the prairie consumer has a heavy transportation charge to pay on these goods, which the new Alberta industry will substantially reduce. This would be a distinct economic gain.

Statistics disclose a vast increase in the use of canned vegetables, fruits and milk products. This is readily accounted for by the constant change in the mode of living of the people. More and more of our town people are adopting new methods of housing and a larger percentage of these people are becoming apartment dwellers. The kitchenette is supplanting the old-time kitchen. The lack of gardening space and time for the production of vegetable products for family needs, is creating an increased demand for the products of the suburban and country producer of vegetable products, both fresh and

ONE FROM ONE
LEAVES TWO
Higgledy, piggledy, my black
hen,
She lays eggs for gentlemen.
Gentlemen come every day
To count what my black hen
doth lay.

If perchance she lays too many,
They fine my hen a pretty
penny;
If perchance she fails to lay,
The gentlemen a bonus pay.

The new bridegroom gave
the porter a dollar not to tell
anyone the woe on their honey-
moon. At breakfast next morn-
ing everyone stared.

"Didn't tell you not to tell
anyone we were married?"
"Yes, suh," replied the port-
er, "an' I told 'em you wasn't
married."

canned. Canned products in con-
venient form and quantity for
quick preparation and consump-
tion are finding a constantly in-
creasing demand in both city
and urban communities alike,
as well as on the farms them-
selves.

The location of the new in-
dustry is excellent. The Brooks
district enjoys a climate which
permits of the successful pro-
duction of tender vegetables
and fruits, and, with the aid
of artificial watering, should be
largely beyond the risk of crop
failure, which will ensure a
steady supply in any year of
the raw products required, and
a certain cash revenue of the
farmers there, who are enthu-
siastically supporting the project.

A Novel Selling Appeal

It is the intention of the pro-
moters to interest the retail
dealers of the prairie section,
through a bonus of stock in
the enterprise, based on their
purchases of the products of
the industry, thus ensuring
steady sales to the public of the
various products of the proposed
factory. The ingenious plan
will, if energetically carried out,
doubtless facilitate the success
of the venture from the very
beginning.

It is the expectation, that
the new industry will interest
itself actively in further colon-
izing the district tributary to
the proposed plant, with a class
of people who will specialize
in the production of the raw ma-
terial required. Some of the
promoters have had a very wide
and successful experience in
that line of effort, particularly
in the district where the factory
is to be located.

The men behind the enter-
prise are largely "old-timers"
in the west and imbued with
the laudable idea of developing
a home market for western pro-
ducts, thus adding to the agri-
cultural prosperity of the coun-
try, and, at the same time, es-
tablishing an industry, which
will prove remunerative to the
shareholders.

Bringing Coal To Newcastle

The whole plan is very much
to be commended, from every
point of view, and it is confident-
ly anticipated, that it will receive
substantial support from those
able to assist with financial in-
vestment and, at the same time,
ensuring for themselves a sat-
isfactory return from the ven-
ture.

Industrial undertakings have
not always been successful in
the West, but the present ven-
ture seems so obviously sound
and natural to the country,
that with any sort of decent
management and financial sup-
port, it is difficult to see how
it could fail. It is essentially an
industry which must be, and
will be, launched on our prairie
section. The spectacle of trans-
porting canned vegetables for
thousands of miles to Alberta
is very much like "bringing
coal to Newcastle." It is econ-
omically ridiculous.

SOFT WATER SAVES SOAP AND CLOTHES

Household laundry costs, as
well as the wear and tear on
clothes, can be materially reduc-
ed by using soft water instead
of hard water.

Water containing hardness
wastes a great deal of soap be-
cause the lime and magnesia al-
ways combine with soap and
change it to "curds." These
curds stick to fabrics and make
them grayish, harsh and rancid
smelling.

Water is very deceptive in ap-
pearance. It may look clean
and pure and yet contain hid-
den impurities. The most trou-
blesome of these are compounds
of lime and magnesia which
cause the hardness in water.

To prevent waste of soap—to
improve the quality of laundry
work—to lengthen the life of
linens, garments, etc.—it is nec-
essary to use water from which
all hardness has been removed.
In water that has been complet-
ely softened, as it is possible to
have it today, there are no im-
purities to destroy soap and no
lime curds to injure clothes.

Besides prolonging the life of
washables by using soft water,
you can count on a fifty per cent.
saving of soap. That is why
small type water softeners are
proving so popular in modern
homes. And, of course, the same
perfect cleansing qualities of
soft water make themselves felt
in practically every other house-
hold operation where water is
used.

Modern beauty and hairdress-
ing parlors now use soft water
for shampoos and other treat-
ments. Soft water completely
softens whatever particles of
foreign matter that may adhere
to the scalp and hair as well as
assuring perfect dissolution of
the soap after the treatment is
finished.

"ALL-BRAN WILL ALWAYS BE A PART OF MY DIET"

Delicious Cereal Corrected
His Constipation

If you suffer from constipation,
read this fine letter:

"I have been troubled for years
with constipation. During this
time, I have tried almost every
known remedy. Then some one
recommended eating Kellogg's All-
Bran, and the proper results fol-
lowed immediately.

"Since eating Kellogg's All-
Bran each morning, there has been
a general improvement in my
health without the ill effects that I
formerly experienced when taking
laxatives. Hereafter, Kellogg's
All-Bran will always be a part of
my diet."—Mr. E. G. Hines (ad-
dress furnished upon request).

Research shows Kellogg's All-
Bran provides "bulk" to exercise
the intestines, and vitamin B to aid
assimilation. All-Bran also sup-
plies iron for the blood.

The "bulk" in All-Bran is much
like that in leafy vegetables. Isn't
this "cereal way" safer than risk-
ing patent medicines?

Two tablespoonfuls daily are
usually sufficient to relieve ordi-
nary constipation. With each meal,
in serious cases. If not relieved
this way, see your doctor.

Be sure to ask for Kellogg's
All-Bran. It contains much more
needed "bulk" than part-bran prod-
ucts. In the red-and-green pack-
age. Made by Kellogg in London,
Ontario.

"The FIRESIDE PHILOSOPHER"

By ALFRED BIGGS

Anger kills justice.

A quick temper ruins judgment.

Indiscretion has ruined many a repu-
tation.

Diplomacy often arises from lack of
courage.

Don't bargain with those who have
nothing to lose.

Personal kindness will destroy anyone's
position.

You need real courage to go forward
when you're afraid.

DON'T let this opportunity go by. Order Kellogg's
Corn Flakes from your grocer today. Special Values
for a limited time only. The world's most popular
ready-to-eat cereal. Made by Kellogg in London, Ont.

Harvesting of fall wheat is in progress now, and if the warm weather continues, spring wheat will be ready to cut in about ten days or two weeks. A good grain would be great! and would do untold good to the late grain especially.

The Lund boys have been breaking into the money pretty regularly in the Southern Alberta Stampedes the last month and right along with them are the Bascom boys. Me! in the saddle events and Earl in the appreciated and would do untold good to the late grain especially.

RECORDER ADVERTISING PAYS

A Human Tendency

Too few business firms employ advertising to lessen their costs of selling.

Business enterprise today has two major problems: 1. To increase sales; 2. To lessen the cost of selling. Yet so many omit the use of advertising, despite their readiness to agree to the proposition that "advertising lessens the cost of selling."

We're frankly amazed at the avoidance of advertising in the face of the knowledge that it costs less to sell with the assistance of advertising than without it.

Strange, strange--- this human tendency to go contrary to what knowledge and experience has taught us is right !

To lessen your cost of selling, we commend to you an adequate campaign of regular advertising in . . .

THE RAYMOND RECORDER

FACTORS IN FRUIT JELLY MAKING

(Experimental Farms Note.)

Three substances are essential to a good jelly. They are pectin, sugar and acid. Pectin is the primary jelling agent. It varies considerably in fruits both in quality and quantity. Analysis of small fruits, in the chemical laboratories of the Central Experimental Farm, has shown how readily pectin deteriorates. To retain their maximum jelling capacity, these fruits should be picked when just ripe and should be used as soon as possible after picking.

Sugar plays an important part in jelly formation. Texture, flavour and yield of jelly are largely determined by the amount of sugar added. Ordinarily the best jellies contain about 66 to 68 per cent of sugar in the finished product, but the necessary amount of sugar to be added will vary with the composition of the fruit. Too much sugar in proportion to pectin and acid is one of the common causes of failure in jelly making. Other things being equal a weak jelly results from the addition of too much sugar and a tough jelly from the addition of too little.

The acid content, or more correctly, the active acidity of fruits is the third essential of jelly formation. If it is too high "sweating" will occur. If it is too low, the jelly will not "set". All fruits contain acid in varying amount.

In general the acid in the fruit provides sufficient active acidity for the making of a good jelly, provided that sufficient pectin and sugar are present.

Investigations in the chemical laboratories have shown how important it is to obtain a proper balance between pectin, sugar and active acidity to produce the best jellies.

A combination of 0.2 per cent acid and 0.5 per cent pectin with 67 per cent sugar was found to give a very satisfactory product.

Ottawa, Ont.
Central Experimental Farm

"Old Bob's going to marry Miss Flighty. She can drive, swim, dance, sing, drive a car, and pilot an aeroplane. Real 'ill-runder'!"

"They ought to get on fine. Old Bob's a good cook."

Tired Worker: Boss, is you got a colored man on you' book named Simpson?

Boss: Yes. What about it?

Tired Worker: Nuthin', only Ah's the man, and Ah just thought you might had it down Sampson.

Strict Orders

The Boss: "On your way to Smith & Sons you will pass a football field."

Office Boy (hopefully): "Yes, sir."

The Boss: "Well, pass it."

Tenders Wanted

Tenders will be received by the undersigned until 2 p.m. on August 2nd, 1934, for the plastering and finishing of one room in the Raymond Public School building.

The lowest or any tender not necessarily accepted by the Board.

THE RECORDER OFFICE

Mumbledy, pumbledy, my red cow,
She's co-operating now.
At first she didn't understand That milk production must be planned;
She didn't understand at first She either had to plan or burst,
But now the government reports She's giving pints instead of quarts. * * *

Fiddle-dee-dee, my next door neighbors,
They are giggling at their labors.
First they plant tiny seed, Then they water — then they weed,
Then they hoe, and prune and lop,
Then they raise a record crop, Then they laugh their sides asunder,
And plow the whole kaboodle under. * * *

Abacadabra, thus we learn The more you create, the less you earn.
The less you earn the more you're given,
The less you lead, the more you're driven,
The more destroyed, the more they feed,
The more you pay, the more they need,
The more you earn, the less you keep,
And now I lay me down to sleep. —Ogden Nash

"My wife has been away for six weeks."
"But why should that make you so downcast?"
"I wrote her every week and said I spent my evenings at home. She's back now and the gas bill just arrived. It's for twenty-five cents."

would do for flying what the Ford car did for motoring.
